

**Amendments to the Specification:**

Please add the following new paragraph after the paragraph ending on line 22 of page 6:

Fig. 15 is a front view of the display device illustrating an alternative embodiment of the present invention.

Please add the following new paragraphs after the paragraph ending on line 26 of page 22:

In one alternative embodiment of the present invention, generally shown in Fig. 15, the modifier values 70 are aligned in positions along a circular path or wheel 120, and one or more award values 68 are randomly associated with a plurality of selections 130a to 130i. The award value 68 positions and modifier value positions further each include at least one characteristic 72.

In this embodiment, a modifier value 70 is determined by the processor and the award value 68 is determined by the player's pick of one of the selections 130a to 130i. The award is determined by the amount of the award value 68 and the modifier value 70. The award values 68 and modifier values 70 may alternatively both be generated by the processor. Similar to the embodiments described above, if the characteristics associated with a generated first position and picked second position match, the player is given an additional award.
